Cambridge Architectural Introduces New Parkade Website and Brochure

CAMBRIDGE, MD... Cambridge Architectural, the world's most experienced – and only full-service - provider of metal fabric solutions, announces the release of its new Parkade website and accompanying brochure.

The new Parkade site, www.CambridgeParkade.com, offers an in-depth look into the components of Parkade woven metal fabric applications – and showcases Cambridge's most unique and forward-thinking Parkade projects. Users can learn more about the beauty, functionality, affordability and sustainable attributes of Parkade woven metal mesh applications by browsing the easy-to-use site. The printed brochure complements the website by elegantly displaying Cambridge's best Parkade projects, metal fabric patterns and applications.

“Parkade applications bring an entirely new perspective to parking aesthetics, while maintaining a long-standing commitment to supreme functionality,” says Heather Collins, director of marketing for Cambridge Architectural. “The new website and brochure will show visitors and readers the extent of our involvement in some of the most innovative parking structures in the United States.”

The site features several different images and content focusing solely on the parking structure application of Cambridge woven metal mesh. Users are able to access the site to view why woven metal mesh is the perfect material for their parking structures. Users can also view photos of completed Parkade projects. Or, if they choose, users can sign up for email updates or fill out a form to be contacted for more information about Parkade applications.

The new Parkade brochure simply and elegantly emphasizes the benefits and the beauty of architectural mesh in parking applications. Readers will see how various mesh patterns and textures can be applied to create extraordinary architecture out of ordinary parking structures.

Cambridge's mesh patterns allow for natural ventilation of car emissions, while simultaneously providing a unique material that is visually pleasing.
